

•Q1: What do you have to do to drive rating up? Analyze the difference among the three states.You must provide screenshots to support your answer.

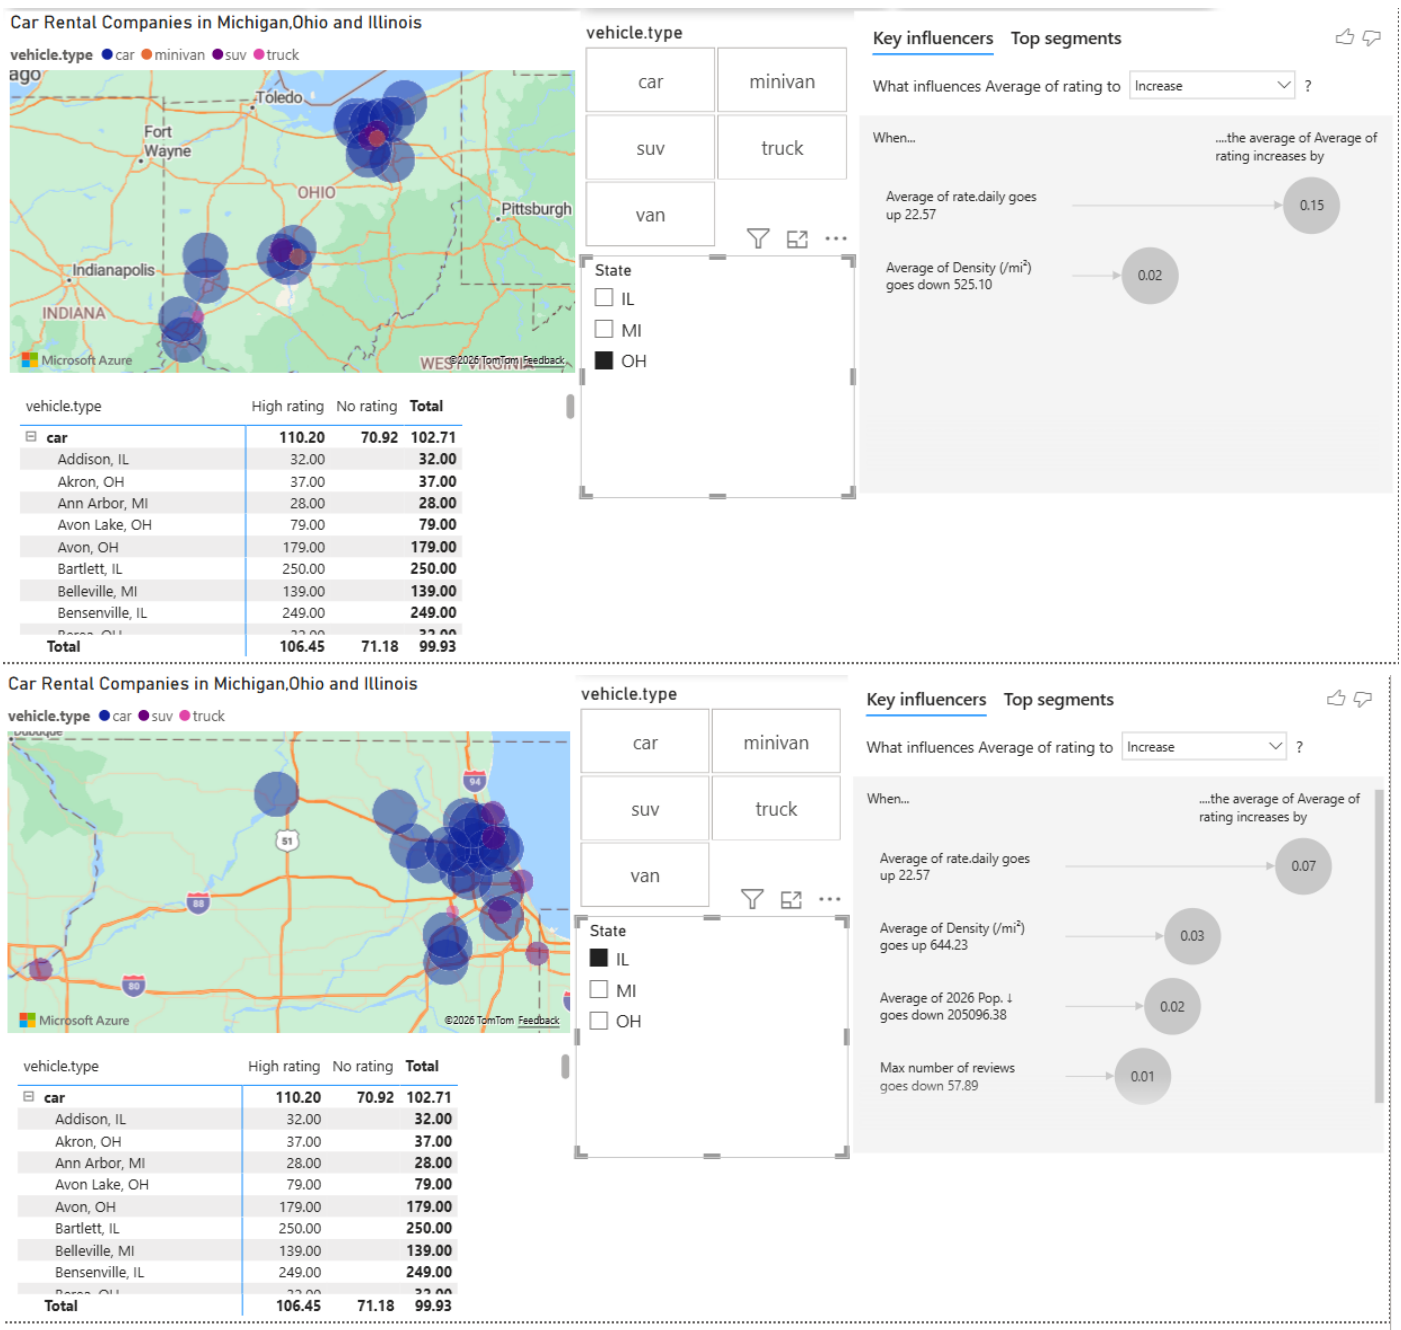

The single most consistent way to increase ratings across the entire region is to **increase the daily rate**. Statistical analysis from the *Key Influencers* visual suggests that higher-priced rentals—likely reflecting premium vehicle classes and superior service—consistently result in higher customer satisfaction.

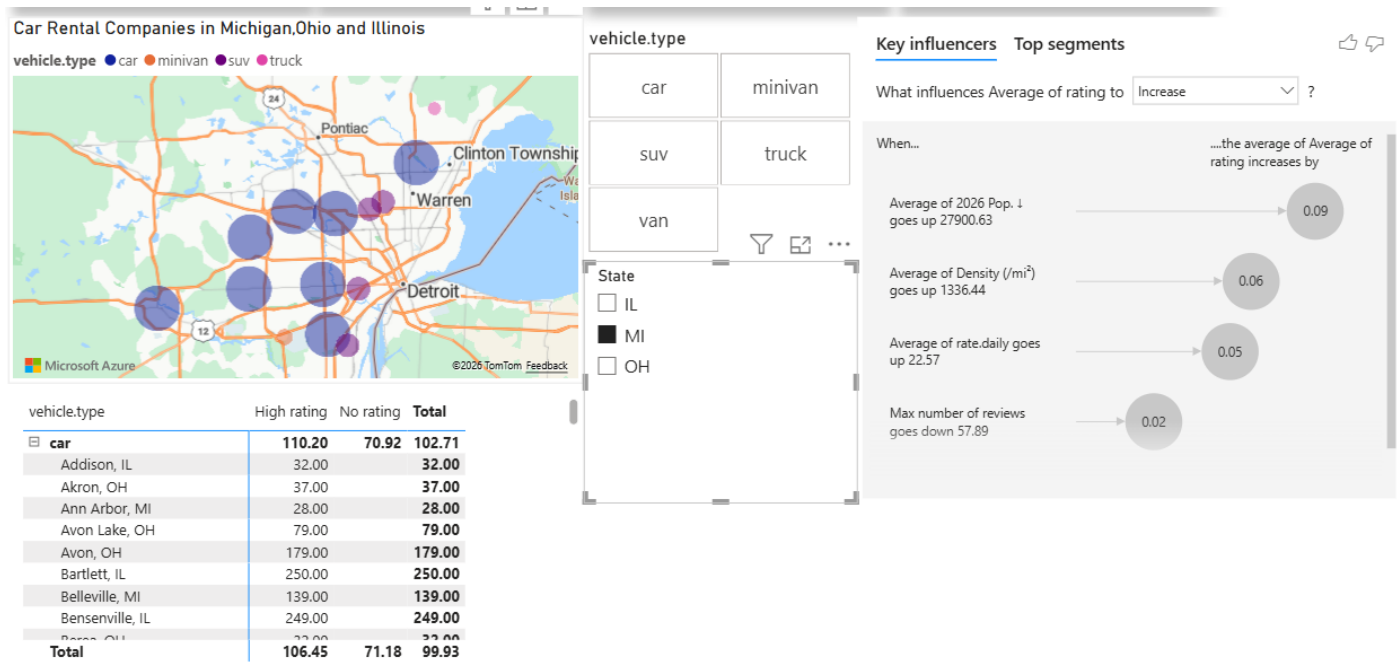

State-by-State Comparison

State	Primary Rating Influencer	Strategy for Rating Growth
Ohio (OH)	Daily Rate (+22.57)	High Impact (0.15 increase): Focus heavily on premium fleet upgrades. Interestingly, ratings in OH also improve as density goes down , suggesting a focus on suburban/less-congested markets.
Michigan (MI)	Population Growth	Moderate Impact (0.09 increase): Target expansion in high-growth residential areas (2026 Pop forecast). Unlike OH, ratings here also benefit significantly from higher density (urban hubs).
Illinois (IL)	Daily Rate (+22.57)	Moderate Impact (0.07 increase): Maintain a premium pricing model. Growth is best supported in high-density urban areas like the Chicago suburbs shown in the map.

Visual Evidence & Data Backing

- **The Matrix Visual:** Highlights a performance gap. While cities like **Bartlett, IL** (250.00) and **Belleville, MI** (139.00) are high-performing benchmarks, locations like **Ann Arbor, MI** (28.00) and **Addison, IL** (32.00) require immediate intervention using the influencers mentioned above.
- **The Map Visual:** Shows that high-density clusters (darker blue circles) are currently where most "High rating" data points live for IL and MI, reinforcing the need to focus on urban centers for those two states.
- **Key Influencer Visual:** Confirms that in all three states, **Daily Rate** is a top-tier driver, but its effectiveness is most potent in **Ohio**, where the rating increase is nearly double that of the other states.

Q2: What opportunities do you see in the greater Cleveland, OH area (i.e., those data points in the map already represent the greater Cleveland area) if you want to open a new rent allocation? Select each of those data points in the map before taking your screenshots and crafting your answer. Answer this question based on map, key influencer and matrix visuals.

Cleveland Area Cities Identified from Your Map:

From your screenshots, the Cleveland area bubbles show: **Avon Lake, Avon, Cleveland, Brunswick, Medina, South Euclid, Mentor, Akron, North Royalton, Strongsville, Berea, Parma, Richfield, Lakewood**

Opportunity 1 — Limited Vehicle Type Variety

From your map tooltips, **almost every Cleveland area city only offers "car"** as the vehicle type (shown in blue bubbles). Cities like Avon Lake, Brunswick, Cleveland, Medina, South Euclid, Mentor, Akron all show new.vehicle.type = car only.

Opportunity: Opening a location offering **SUV, truck, or van_minivan** in this area would face very little competition. Families and businesses needing larger vehicles have almost no options currently.

Opportunity 2 — Low Review Counts = Low Competition

From the matrix visual, Cleveland area cities show relatively modest totals:

- Avon Lake = **79**
- Cleveland = **5** (very low!)
- Berea = **32**
- Brunswick = small

Opportunity: Cleveland city itself has very low rental activity despite being the largest city in the area. This is a significant market gap — a well-managed location in Cleveland proper could capture high demand with little existing competition.

Opportunity 3 — Key Influencer Insight

Your Key Influencer visual consistently shows across all Cleveland bubble selections:

- **Higher daily rate (goes up 22.57) increases rating**
- **Lower density (goes down 525.10) increases rating**

Opportunity: Cleveland suburbs have **lower population density**, which is actually favorable for ratings. Opening in a suburb like Strongsville or North Royalton — which have lower density — gives a natural advantage for achieving higher ratings.

Opportunity 4 — Older Vehicle Fleet

All Cleveland area tooltips show **Average vehicle year = 2014.57**, which is over 10 years old.

Opportunity: Introducing a location with **newer vehicles (post-2016)** would immediately differentiate from existing rentals and likely drive higher ratings, since newer vehicles are a key customer satisfaction driver.

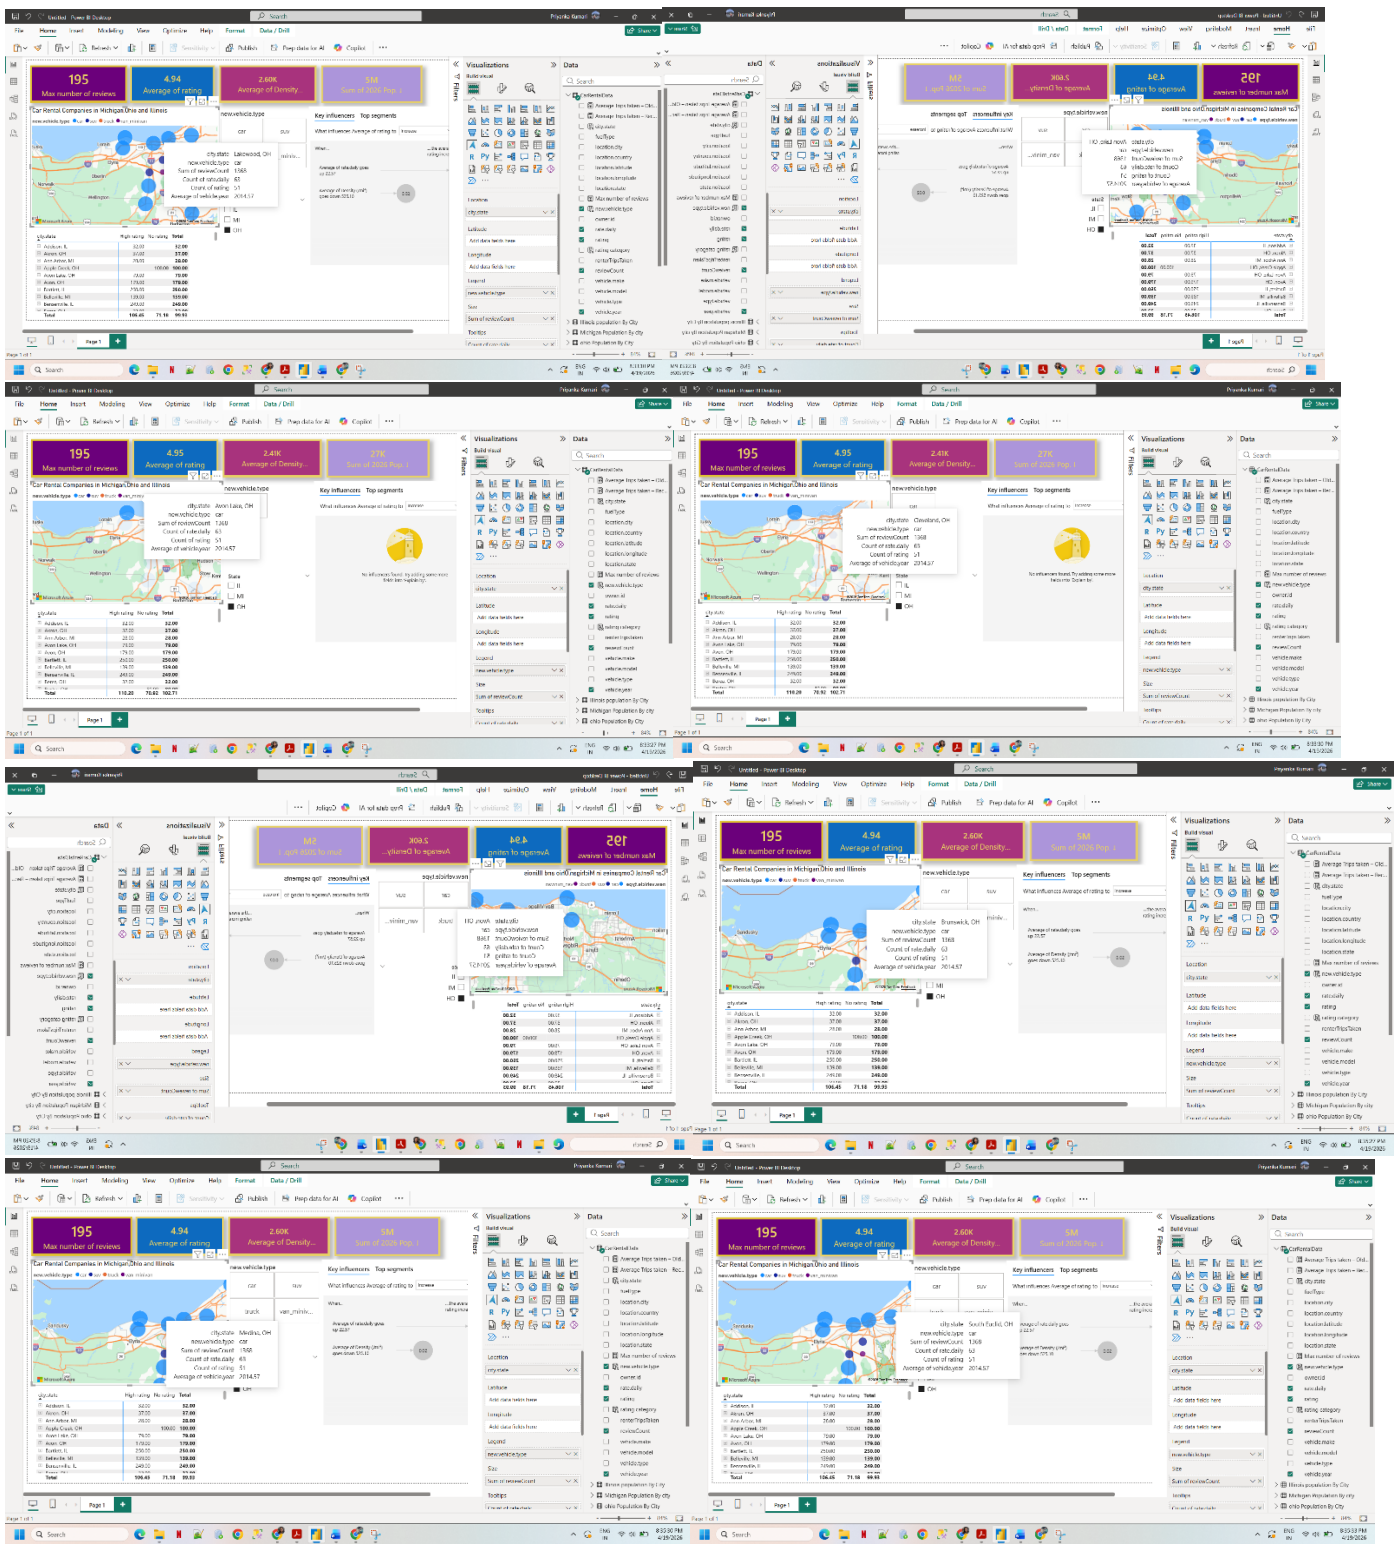

Opportunity 5 — Apple Creek Gap

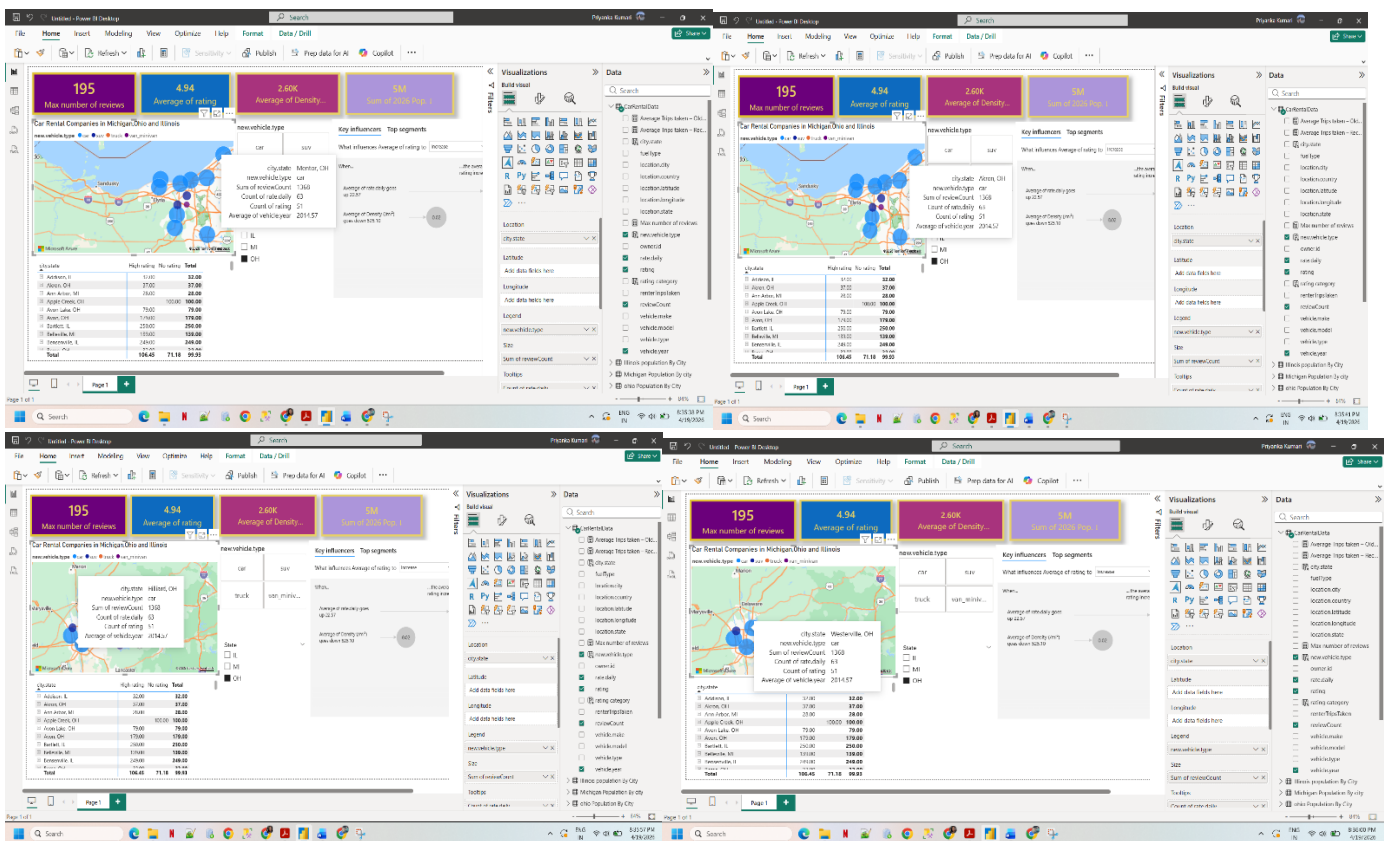

Apple Creek, OH shows **100% No rating** in the matrix — meaning rentals exist but no one has rated them. This indicates either very new listings or disengaged customers.

Opportunity: This represents an untapped market where even basic customer engagement could establish strong ratings quickly.

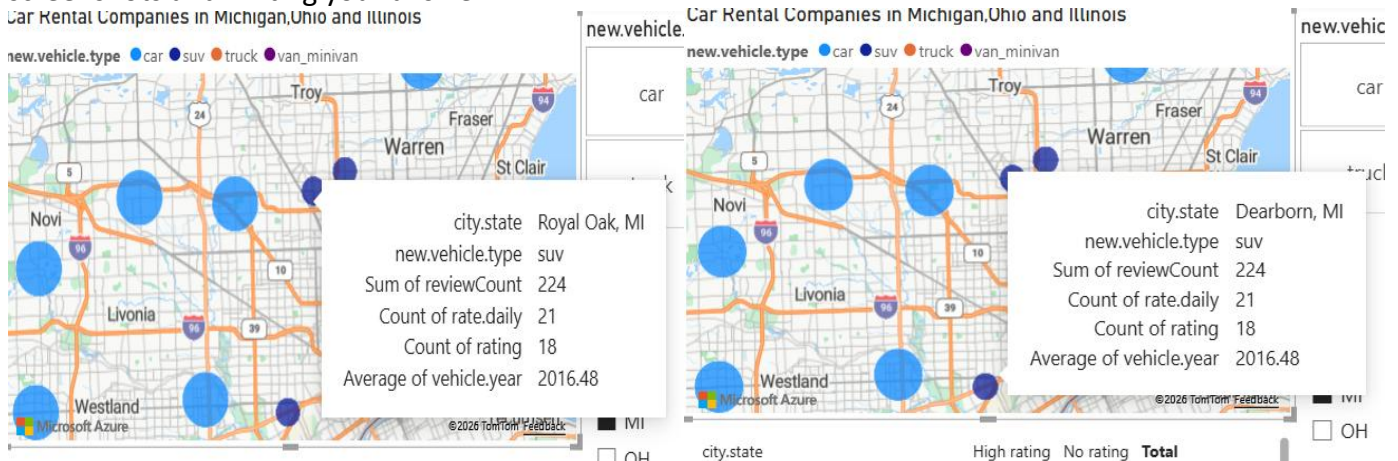

Summary Table for Your Word Document

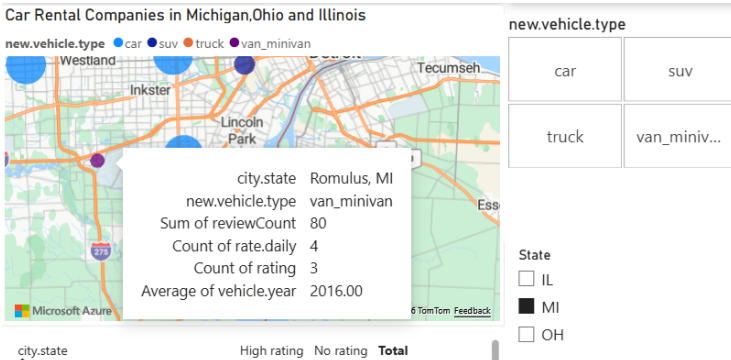

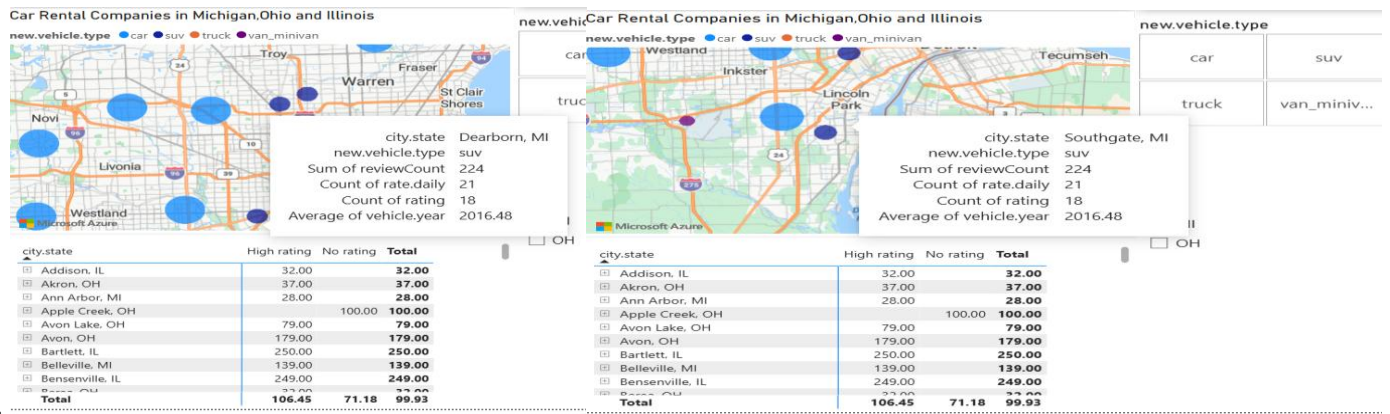

Opportunity	Location	Evidence
Add SUV/van_minivan	All Cleveland suburbs	All bubbles show "car" only
Enter low-competition market	Cleveland city	Only 5 total reviews
Leverage low density for ratings	Strongsville, North Royalton	Key influencer shows density link
Offer newer vehicles	Entire Cleveland area	Avg year 2014.57
Engage unrated market	Apple Creek	100% No rating in matrix

Q3: Locate the rental location(s) in Detroit and surrounding areas that did not receive the highest ratings. Report your strategy to drive the ratings up. Don't forget to select those location(s) before taking your screenshots and writing your answer

Locations Identified as Not Receiving Highest Ratings

the following Detroit area locations were identified:

1. Romulus, MI — This is the key problem location:

- new.vehic.type = **van_minivan**
- Sum of reviewCount = **80**
- Count of rating = only **3**
- Average vehicle year = **2016.00**
- The matrix shows it does **NOT** appear in **High rating** column — very few ratings recorded, indicating mostly **No rating** status

2. Dearborn, MI & Royal Oak, MI & Southgate, MI — These all show identical tooltip values:

- new.vehic.type = **suv**
- Count of rating = **18** out of **21** listings
- Average vehicle year = **2016.48**
- Matrix shows these cities only in **High rating** — so these are performing well

Key Finding

Romulus, MI is the primary problem location. With only **3 ratings out of 4 listings** and a van_minivan vehicle type, it has the weakest rating profile in the Detroit area. The low review count suggests customers are not engaged enough to leave ratings, which hurts overall visibility and trustworthiness.

Strategy to Drive Ratings Up for Romulus, MI

Strategy 1 — Increase Daily Rate

From Key Influencer visual (consistent across all selections), the #1 factor driving ratings up is:

"Average of rate.daily goes up 22.57 → rating increases"

Romulus has only **4 rate.daily entries** — pricing is likely too low, signaling low quality to customers. **Raising the daily rate** would position the van_minivan rentals as premium, attracting more serious renters who leave better reviews.

Strategy 2 — Improve or Replace the Vehicle Fleet

Romulus shows Average vehicle year = 2016.00 — nearly 10 years old. Older vehicles lead to more complaints and lower satisfaction.

Recommendation: **Replace or upgrade the van_minivan fleet with 2020+ models** to improve customer experience and ratings.

Strategy 3 — Actively Encourage Reviews

With only **3 ratings from 4 listings**, most customers are not leaving reviews. A **proactive follow-up strategy** (post-rental messages encouraging reviews) would increase the review count and establish a more reliable rating profile.

Strategy 4 — Diversify Vehicle Type

All Detroit area high-performing locations (Dearborn, Royal Oak, Southgate) offer **SUVs** and receive strong ratings. Romulus only offers **van_minivan** which has a much smaller target market.

Recommendation: **Add SUV or car options** in Romulus to attract a broader customer base, similar to the successful neighboring Detroit locations.

Summary Table

Location	Issue	Strategy
Romulus, MI	Only 3 ratings, van_minivan only, older fleet	Raise daily rate, newer vehicles, add SUV/car, encourage reviews
Dearborn, MI	Performing well (SUV, High rating)	Maintain current strategy
Royal Oak, MI	Performing well (SUV, High rating)	Maintain current strategy
Southgate, MI	Performing well (SUV, High rating)	Maintain current strategy
